

6. What does our data tell us? What is the biggest danger to Formby?

After fieldwork

After you've carried out your fieldwork, you need to:

- Analyse
- Present
- Evaluate

How to analyse

When you analyse your findings, you should:

- look at all of them
- try to understand them

How to present

When you present your findings to others, you should:

- explain things clearly
- add graphs to make it easier to understand
- draw clearly labelled maps
- put notes on photos
- explain what you found out

How to evaluate

When you evaluate your findings, you should:

- think about how well you carried out your investigation
- think about what you could do better next time.

Evaluating questions

- What went well in your fieldwork?
- Did you use the right tools?
- What would you do differently if you did the fieldwork again?
- What else do you want to find out?
